

Name: Carbon Reduction Plan - Initial Reporting Statement

Version: 01/26

Published: 24 October 2026

Baseline Reporting Period: 01 April 2027 to 31 March 2028

Reporting Boundary: UK Operations

Boundary Approach: Operational Control

Commitment to achieving Net Zero

SIACO Limited is committed to achieving Net Zero greenhouse gas emissions by 2050 at the latest.

SIACO is an independent UK security consultancy. We recognise our responsibility to understand and reduce the environmental impact associated with our business activities and to consider carbon reduction as the business develops.

This Initial Reporting Statement sets out SIACO's current position, the environmental measures already being adopted and our approach to establishing a reliable greenhouse gas emissions baseline.

Carbon Emissions Reporting

SIACO has not historically maintained the activity data required to calculate a complete organisational greenhouse gas emissions footprint to the reporting standard required by PPN 006.

Rather than retrospectively producing emissions figures that cannot be supported by sufficiently reliable evidence, SIACO is establishing a formal carbon monitoring process.

Our first complete baseline reporting period will be 01 April 2027 to 31 March 2028.

During this period, SIACO will collect the activity data necessary to establish its Scope 1 and Scope 2 emissions and the applicable Scope 3 emissions required for Carbon Reduction Plan reporting.

Following completion of the baseline period, SIACO will calculate its greenhouse gas emissions using the applicable UK Government greenhouse gas conversion factors and publish an updated Carbon Reduction Plan containing its emissions baseline and measurable reduction targets.

SIACO Emissions Profile

SIACO has begun identifying the principal sources of greenhouse gas emissions associated with its operations.

These currently include:

- fuel consumption associated with company-operated leased plug-in hybrid vehicle;
- energy associated with SIACO's office accommodation;
- business travel;
- employee commuting;
- waste generated through office activities; and
- relevant upstream and downstream transportation and distribution activities, where applicable.

SIACO operates its office under a licence arrangement under which utilities are included within the licence fee and are not purchased separately by SIACO. Information has been requested from the building operator to establish whether actual consumption data, or an appropriate allocation of building energy consumption, can be provided.

Waste services are managed by the building operator as part of the office licence arrangement. SIACO will seek available waste data or an appropriate allocation to support its emissions reporting.

Scope 1 and Scope 2 emissions, together with Scope 3 Categories 4, 5, 6, 7 and 9, are the emissions categories required under the PPN 006 Technical Standard.

Carbon Reduction Measures

Digital-first Operations

- Electronic documentation and administration wherever possible.
- Minimising printing and physical document distribution.

Business Travel

- Use remote meetings where physical attendance is not necessary.
- Combine site visits and meetings where practical.
- Avoid unnecessary business journeys.
- Consider rail and other lower-emission transport options.
- Monitor company vehicle mileage and fuel consumption.

Office Operations and Resources

- Avoid unnecessary energy consumption.
- Seek appropriate energy consumption information from the building operator.
- Extend the useful life of IT equipment where practical.
- Use appropriate reuse, recycling or disposal routes when equipment is replaced.

Carbon Monitoring

From 1 April 2027, SIACO will maintain proportionate records sufficient to calculate its Scope 1 and Scope 2 emissions and the applicable required Scope 3 emissions for the baseline period.

This will include, where applicable:

- company vehicle mileage and fuel consumption;
- vehicle charging information where reasonably measurable;
- other business travel;
- employee commuting;
- office energy information;
- waste information; and
- relevant transportation and distribution activity.

Emissions Reduction Targets

SIACO's long-term target is to achieve Net Zero greenhouse gas emissions by 2050 at the latest.

SIACO will establish a measurable interim emissions-reduction target once its first evidence-based carbon footprint has been calculated.

This will ensure that the target reflects SIACO's actual emissions profile and focuses reduction activity on the areas where meaningful improvements can be achieved.

The Carbon Reduction Plan will subsequently be reviewed and updated annually.

Next Reporting Milestone

SIACO's first complete baseline period will end on 31 March 2028.

Following completion of the baseline period, SIACO intends to update this document to include:

- Scope 1 emissions;
- Scope 2 emissions;
- the applicable required Scope 3 emissions;
- total emissions expressed as tCO₂e;
- an evidence-based interim carbon reduction target; and
- progress against identified carbon reduction measures.

This Initial Reporting Statement will then be superseded by SIACO's full Carbon Reduction Plan.

Declaration

SIACO Limited recognises that complete historical emissions data is not currently available and has therefore not presented unsupported retrospective estimates as verified organisational greenhouse gas emissions.

SIACO is implementing the data collection necessary to establish its first evidence-based emissions baseline for the period 1 April 2027 to 31 March 2028.

SIACO is committed to reducing its greenhouse gas emissions over time and achieving Net Zero greenhouse gas emissions by 2050 at the latest.

The environmental management measures outlined in this statement will be applied where relevant during the delivery of SIACO's services and will be reviewed as the company's operations develop.

This Initial Reporting Statement has been reviewed and approved by SIACO Limited.

Approved and signed on behalf of SIACO Limited
